

Fiberlaser

Close the program "*Fiber Comb Control*", otherwise you can't optimize the comb!

- Push Yes

- Push OK

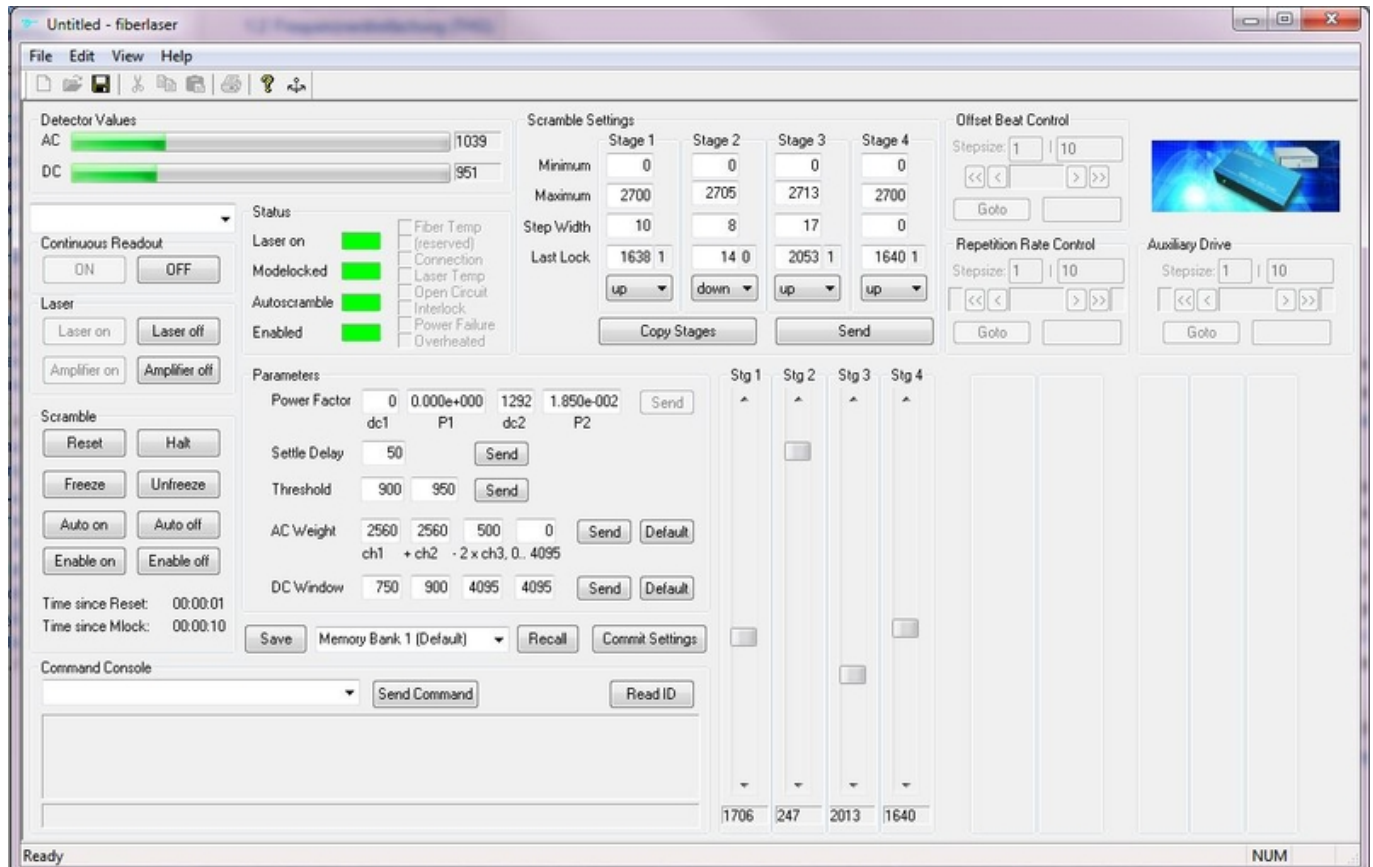

- If you **turn off and on** the frequency comb, then push in the order:
 1. *Reset*
 2. *Auto on*
 3. *Enable on*

The program is done, if all four boxes [*Laser on*, *Modelocked*, *Autoscrumble*, *Enabled*] are green!

- For **closing** the software:
 1. *Halt*
 2. *Freeze*
 3. Close the window
