

Net View

For starting Net View klick only once and wait, the program need time 😊 !

If Net View doesn't start, then restart the computer!

“Connection”-window:

“GPS receiver”-button must be selected.

Push “connect”-button.

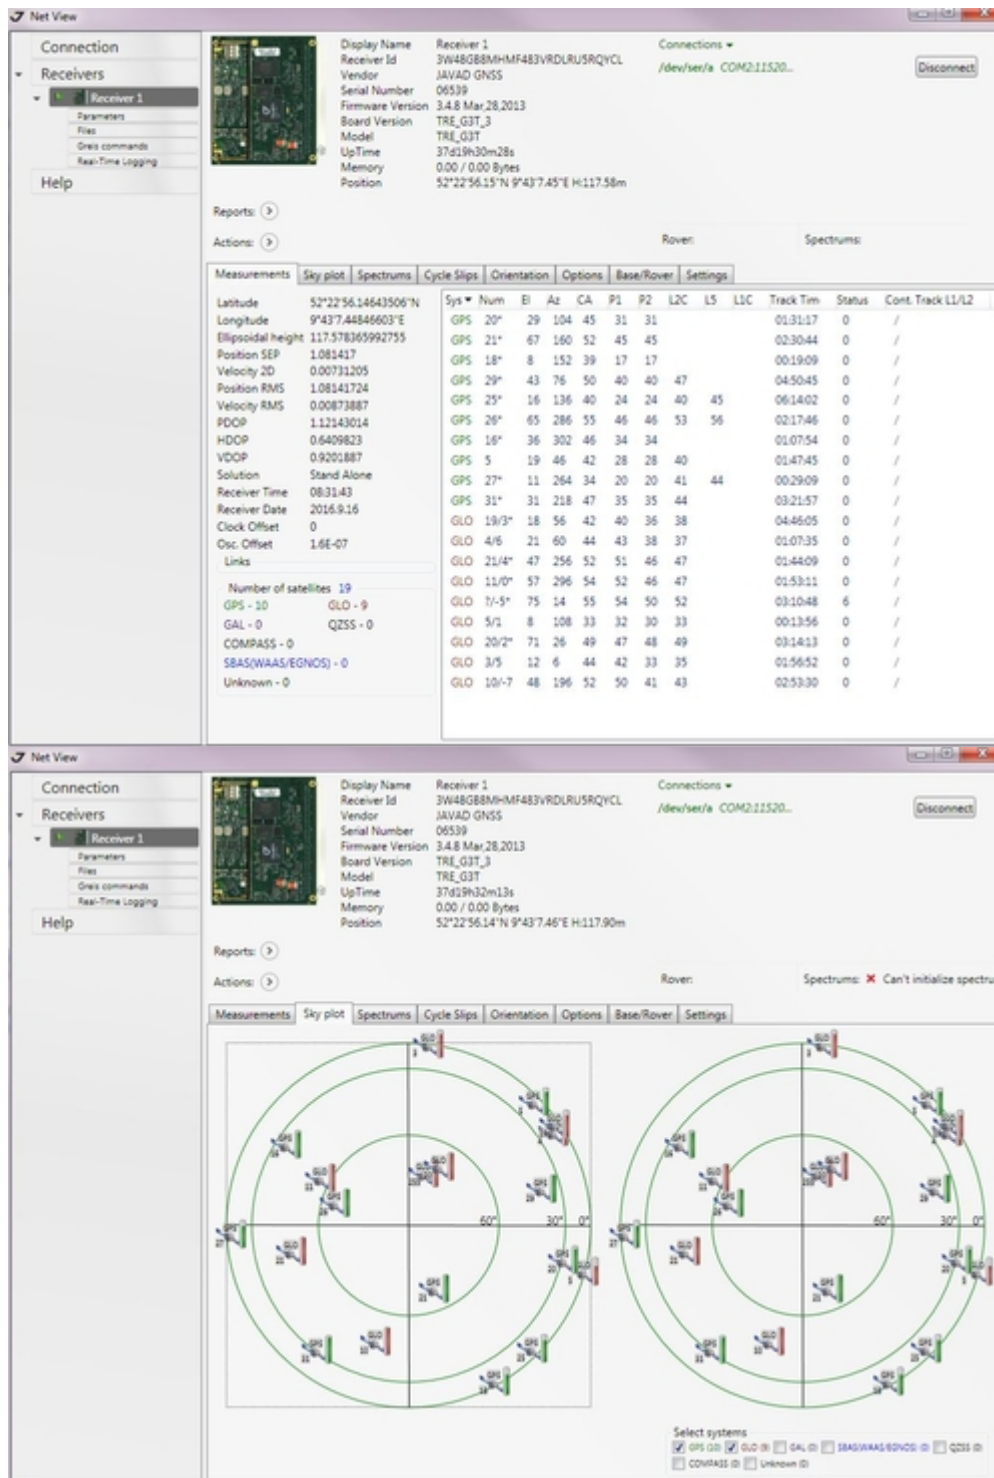

The screenshot shows the 'Net View' application window. On the left is a sidebar with a 'Connection' tab selected, containing a tree view for 'Receivers' (Receiver 1) and sub-items like Parameters, Files, Greis commands, Real-Time Logging, and a Help button. The main area is titled 'Recall from slot:' and shows buttons for Slot 1 (GPS Receiver), Slot 2 through Slot 10. Below this, the 'Connection settings GPS Receiver' section includes dropdowns for 'SER' (set to SER), 'Port' (set to COM2), and 'Baud Rate' (set to 115200). There is an 'Advanced' button and a 'Refresh Ports' button. At the bottom of this section are 'Save to slot:' (set to GPS Receiver), 'Slot name:' (set to GPS Receiver), and a 'Save' button. A 'Connect' button is centered below. The 'Last connections:' section contains a table with columns: Connection settings, Status, Time, Slot, and a 'Dis' button. The table lists three connection attempts. At the bottom right is a 'Remove Disconnected' button.

Connection settings	Status	Time	Slot	
SER COM2:115200, 8, One, True	Access to the port 'COM2' is denied.	9/16/2016 8:29:28 AM	GPS Receiver	
SER COM2:115200, 8, One, True	Connected to receiver ID:3W48GB8MHMF483VRDLRU5RQYCL /	9/16/2016 8:21:08 AM	GPS Receiver	Dis
SER COM3:115200, 8, One, True	Receiver on port COM3 was not found.	9/16/2016 8:20:59 AM	GPS Receiver	

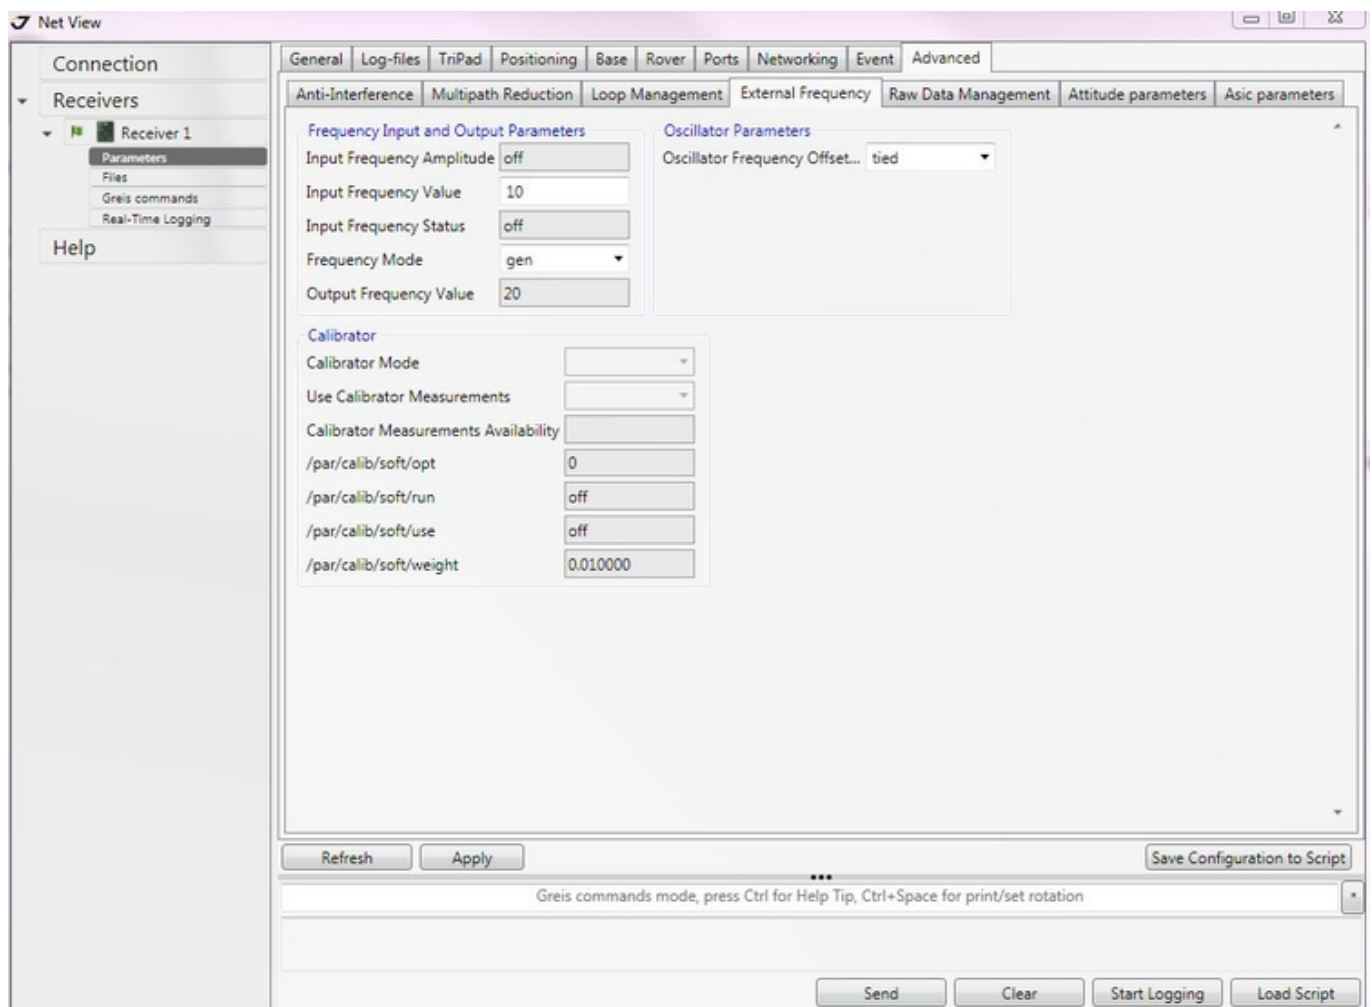

“Receiver”-window:

The “Measurements”-button/setting shows the coordinates of the satellites.

The “Skyplot”-button/setting shows the connections with the satellites and the names.

You can change the reference frequency from "Empfänger 1" under "**Parameter**"-window → "Advanced"-button → "External frequency"-button.
