Virtual-Beat

- fv = (fy + fceo) - ((fx + 2*fceo) / (3275292/1944000)) + (2*10 MHz)

Evaluation (PTB)

- fx= col© (#1, negatives fx)
- fceo=col(d) (#2) (negatives fceo)
- frep=col(e) (#3, frep/16)

Test analysis

- nu_opt(Mg) - nu_(Mg2015)[Hz] = nu_opt(Mg) - 655058646691000

→ nu_opt(Mg) - nu_(Mg2015)[Hz] = (f_laser + 80,111e6)*2 + 77,111e6 - 655058646691000

Clocks hight in respect to the geoid

In front of the university are studs, which which are used as a reference. The PDF where everything is explained is given by Dr. Heiner Denker (Institut für Erdvermessung (IFE)), he will also estimate the experiments hight witch higher precision soon.
