

WFP, NJ, PG, SS, Nishad, KHZ

Atomslab

- Last week, spectroscopy measurements to check for result of SWAP. unfortunately there is RF leakage from spectroscopy synthesizer during SWAP, which screws the results. Need to get this sorted.
- There is fluctuation of laser 2 power even after power stabilization with AOM (~about 0.5 mW or so). Need to take care of this as well.
- PG prepares his talk for his M.Sc talk (19.11). Needs some final discussions for finalizing the talk.
- Nishad's master thesis is registered since 22nd October. Now he has 6 months deadline.
- Nandan still working on the paper

Reslab

- Measurements @ LENA. Will do measurements in LENA and will write while in Hannover to finish his thesis.
- Measured reflectivity of 99.6 % at 1560 nm.
- Waiting for higher power splitter to be able to improve the ring down measurement
