

Jour Fixe

SS, PK, WFP, NJ, kHz

General

- Final move to common messaging platform: Signal [Mg signal group](#)
 - As a sidenote: There is the LUH hosted Matrix server @ <https://matrix.uni-hannover.de>
 - Does not require registration. Use your LUH WebSSO credentials.
 - Decentralized, end-to-end encrypted chat platform, which can bridge to other messengers like signal, whatsapp etc
 - Has a ton of clients available like [Element](#).
- WFP on parental leave from July for up to 12 months with the option to come back earlier
 - NJ will take over the lab once WFP left, assuming and hoping that NJ will be graduated by then

Atomslab

- SWAP in different dipole traps (powers) and SWAP detunings
 - Expect a shift to lower dipole powers
- Locked Tisa to lattice and prepared for spectroscopy
- Quench
 - Measured linewidth of wutz
 - 400 Hz. ~ x10 less than expected. Laser linewidth the reason?
