GaAs Semiconductor Laser Diode

18.09.2008 page: 1 from 4

# PRELIMINARY SPECIFICATION

# **Tapered Amplifier**

#### **General Product Information** Product Application 915 nm Tapered Amplifier Spectroscopy C-Mount Package Metrology

EYP-TPA-0915-01500-3006-CMT03-0000

#### Absolute Maximum Ratings

	Symbol	Unit	min	typ	max
Storage Temperature	Ts	°C	-40		85
Operational Temperature at Case	T <sub>c</sub>	°C	0		50
Current	I <sub>F</sub>	А			3.3
Reverse Voltage	V <sub>R</sub>	V			0
Output Power	P <sub>opt</sub>	W			1.7

#### **Recommended Operational Conditions**

	Symbol	Unit	min	typ	max
Operational Temperature at Case	T <sub>C</sub>	°C	5		40
Forward Current	I <sub>F Gain</sub>	А			3.0
Input Power	P <sub>input</sub>	mW	10		50
Output Power	P <sub>opt</sub>	W			1.5

# Characteristics at T<sub>amb</sub> 25 °C at Begin Of Life

Parameter	Symbol	Unit	min	typ	max
Center Wavelength	$\lambda_{C}$	nm	900	915	925
Gain Width (FWHM)	Δλ	nm	10	20	
Temperature Coefficient of Wavelength	dλ / dT	nm / K		0.3	
Amplification		dB		15	
Operational Current @ $P_{opt} = 1.5 W$	I <sub>op Gain</sub>	А			3.0

## non condensing

non condensing

Stress in excess of the Absolute Maximum Ratings can cause permanent damage to the device. Operation at the Absolute Maximum Rating for extended periods of time can adversely affect the device realibility and may lead to reduced operational life.

## PRELIMINARY SPECIFICATION

# **Tapered Amplifier**

# EYP-TPA-0915-01500-3006-CMT03-0000

### Characteristics at T<sub>amb</sub> 25 °C at Begin Of Life

Parameter	Symbol	Unit	min	typ	max
Output Power @ $I_F = 3.0 \text{ A}$	P <sub>opt</sub>	W	1.5		
Cavity Length	L	μm		2750	
Input Aperture (at rear side)	d <sub>input</sub>	μm		3	
Output Aperture (at front side)	d <sub>output</sub>	μm		190	
Astigmatism	А	μm	500	600	700
Divergence parallel (FWHM)	$\Theta_{  }$	0		14	
Divergence perpendicular (FWHM)	$\Theta_{\perp}$	0		28	
Polarization				TE	

Measurement Conditions / Comments					
with proper injection from a seed laser					
depending on operating conditions					
E field parallel to junction plane

#### **Typical Measurement Results**

Spectrum measured w/o injection:

Performance figures, data and any illustrative material provided in this specification are typical and must be specifically confirmed in writing by eagleyard Photonics before they become applicable to any particular order or contract. In accordance with the eagleyard Photonics policy of continuous improvement specifications may change without notice.

#### Unpacking, Installation and Laser Safety

Unpacking the laser diodes should only be done at electrostatic safe workstations (EPA). Though protection against electro static discharge (ESD) is implemented in the laser package, charges may occur at surfaces. Please store this product in its original package at a dry, clean place until final use. During device installation, ESD protection has to be maintained.

The TPA diode type is known to be sensitive against thermal stress. It should not be operated without appropriate injection from a seed laser. Operating at moderate temperatures on propper heat sinks will contribute to a long lifetime of the diode.

The laser emission from this diode is close to the invisible infrared region of the electromagnetic spectrum. Avoid direct and/or indirect exposure to the free running beam. Collimating the free running beam with optics as common in optical instruments will increase thread to the human eye.

Each laser diode will come with an individual test protocol verifying the parameters given in this document.
